## Simple Distillery Installation in Boston, Massachusetts

### Scope of the Job:

The job involved installing a complete exhaust and intake venting system for a Rinnai unit. This included setting up new vent runs, properly supporting the system, and ensuring all components were securely mounted and aligned for efficient operation.

### Product Used:

**3" InnoFlue®** for exhaust and intake, along with **OctoClamps** and **3/8 Threaded Rod** systems for support.

### Installer Info:

## Mike from Ciardi Plumbing at a Distillery Project in Boston, Massachusetts

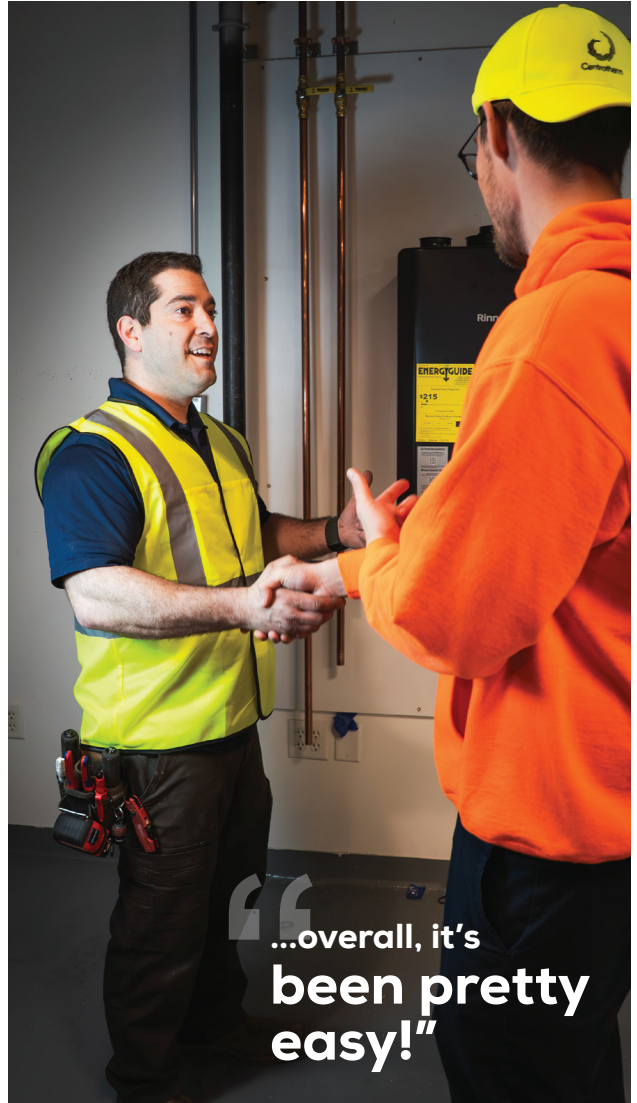

“The best thing about this is it makes a nice, tight fit. I’m actually pretty impressed! It goes together pretty simple.”

– Mike, “Ciardi Plumbing”

Mike from Ciardi Plumbing highlights a recent installation at a distillery project in Massachusetts, where his team is working with Centrotherm. The focus of the job is implementing a new exhaust and intake system for a Rinnai water heater.

A key component of the project is the Octo Clamp, which Mike describes as a highly versatile solution for securing venting systems. He explains, “*You have multiple points of connections... you can hang it from each individual way, from two different styles.*” The clamp allows for flexible installation methods, whether connecting side-to-side with threaded rod or suspending it from above or below. This adaptability makes it suitable for a range of configurations, helping installers adjust to different jobsite requirements with ease. “*You can either connect them from side to side with threaded rod in between, or you hang threaded rod from the top or the bottom and use this to clamp around the threaded rod.*”

Overall, Mike emphasizes the simplicity and effectiveness of the system, noting its strong performance during installation. His takeaway is clear: the Octo Clamp not only streamlines the installation process but also delivers a secure and reliable result, leaving him “*pretty impressed*” with its performance in the field.
